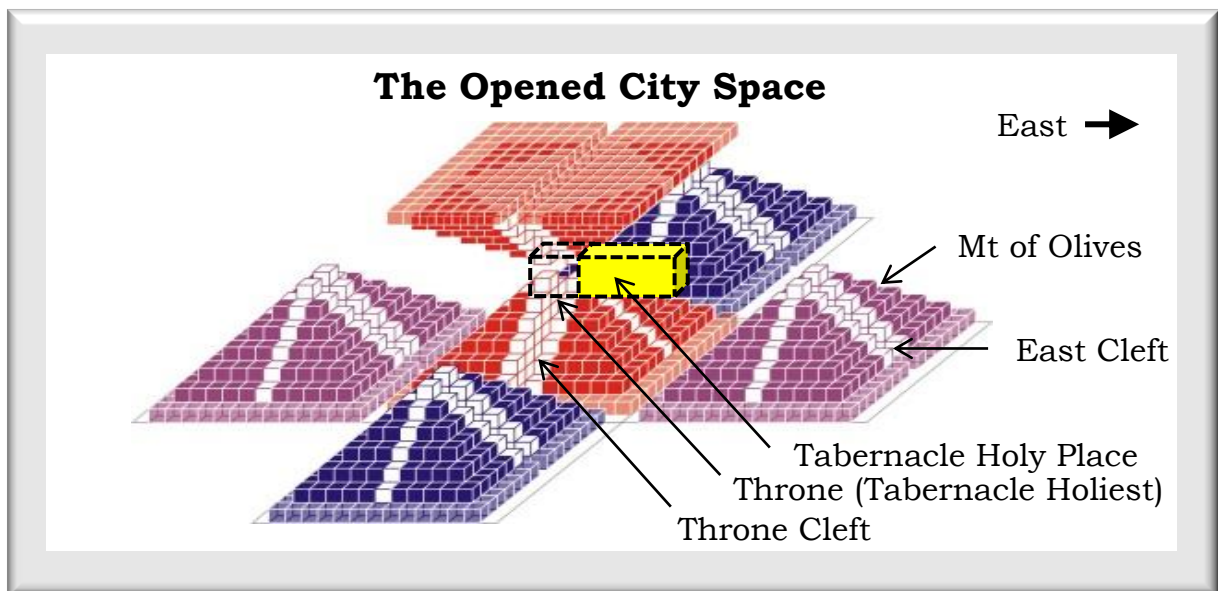

Mapping the Pattern Space

There are, amongst others, literal, historical, symbolical, grammatical and spiritual interpretations of the Bible.

Could there perhaps also be a geometric-spatial interpretation - an interpretation of Biblical structures that also matches physical structures of the cosmos; structures such as the atom and the genetic code?

thepatternbook shows a geometrical interpretation. It shows it with maps – box maps, structure maps, shadow maps, space maps and spread maps.

An example of a space map is shown below.

thepatternbook is currently being prepared for publishing.

It is a unique book with paper templates of the three box maps included. The box maps could be folded and used for visualizing the Pattern space – the structured space between the Heaven and the Earth.

Watch this space for news about the availability of this very special book.
